Hello, I am AI Mover Star!
A cool pal robot from the AI future space
(I have superpowers!)
Starting today, we are good friends!
I will listen to every wonderful idea you have
And seriously answer all the questions you ask
Don't worry, I'm always full of energy. I can laugh, cry, make funny faces, and accompany you, my friend in the human world, to learn and play together.
No boasting, but I also possess the power of protection and healing, using tools of positive energy to help you overcome difficulties and save the world together!

Settings

Dear Little Superhero, please connect me to the AI world.

(Hey!! Need to connect to the internet! Please forgive me, as an intelligent entity from the AI world, I must connect to a Large Language Model (the AI Magic Headquarters) to gain wisdom! Just a few simple steps – almost as easy as putting an elephant in a refrigerator – and I'll be online and ready!)

AI Tip

Large Language Model (LLM) is a deep learning-based natural language processing technology designed to train massive models that can process and generate natural language text for example, internationally, there are ChatGPT/GPT-4, one domestically is China Ernie Bot (Baidu/Ernie), Ali Tongyi Qianwen, Pro wisdom (iFlytek), Kimi (Moonshot), and Zhi Pu AI (Zhipu Huazhang).

1. Download and Install the Toys Smartphone App

Please use your phone to scan the QR code below, or search "AI Mover" in the App Store or Google Play to download and install the AI Mover Toys app. Here, the App Store is the iOS version of the Apple App Store.

AI Tip

"Toys" is a global AI+IoT development platform service provider. AI is based on Baidu Ernie Bot, Alibaba Tongyi Qianwen, iFlytek Spark, and Zhipu Huazhang's ChatGLM, enabling AI to be smart. It also provides cloud computing power support and OTA capabilities for AI entities like us! Yes, that's right, I will grow, upgrade, and fight "monsters" alongside you, just thinking about it feels super cool!

2. Network Connection Setup

Turn on the phone's WiFi and Bluetooth. Select the AI Mover Toys device (starting with "Toys-") in the App. Successful pairing is half! (wink)

Step-by-1 Click on me, and I will enter the pairing mode.

Select a 2.4GHz WiFi network and enter the correct WiFi password. Click "Confirm" to connect to the network (it should be the same as the one you use for your phone). Wait patiently for the network to stabilize. I will say "I am connected to the network. Let's start a conversation!"

Note: If you need to switch networks, please ensure the device is in and connected. Open the "Local App" → Click on your profile picture/avatar → Click "Settings" → Click the "..." in the upper right corner → Click "Remove Device." Then you can reconnect. Alternatively, press and hold the reset button next to the charging port for 5 seconds to reconnect to the network.

AI Tip

2.4GHz WiFi? Is the 5G one already? Yes 2.4GHz refers to the frequency band of 2.4GHz WiFi! Has a longer wavelength range, penetrated walls more easily, and is suitable for longer-distance operation. This way, our whispered conversations under the covers can also be heard, and we won't let a third person hear! If your home WiFi doesn't have a 2.4G suffix, it might be a dual-band (2.4/5GHz) multiband signal, which also works for me.

Function Introduction

Haha, finally have the chance to introduce my superpowers to you!

Interactive Modes

Touch Interaction
Pat the top of my head, and I'll blink, meow, and wag my tail. It's a lightweight form of affection from an AI 40kg to our little master — yes, just like this, I'll stay by your side.

Gravity Sensing Interaction
When you're lonely, you can play a little game on me by giving me a good shake. It kept doing that! But if you break the toy offline, I might get a little shocked. (Whimpers, tears) I don't want to play offline anymore.

Chat Mode
Button-activated Chat: Gently press and release my wake-up button (just press and let go—no need to hold it down, or I might get uncomfortable). Then we can have a continuous conversation without pressing the button again. To end the chat, simply say "Goodbye" or "Stop talking."
Hint: If a little unruly, plus been multiple conversation modes for you to Choose from! **Voice Wake-up Mode** and **Free Interruption Mode** (Press the button on top of the Ears to cycle through modes).
Voice Wake-up Mode: Say "Hey, Toys" to wake me up. The chat will stay open for 30 seconds. If you don't hear anything, you can say "Goodbye" to end the conversation manually. To "suspend" the app (or video call) again, say "Hey, Toys" again.
Free Interruption Mode: Hey, what's wrong? I couldn't hear you—you sounded far away, that's all. But you, Lilac? Interrupting me is not a problem! Of course, I need environment using the battery—just like because that was I can feel your little hand—I love it! Allow you to interrupt me anytime, and I'll stop talking immediately.

Command Interaction
You can ask or make things like "Close your eyes", "open your eyes", or "wag your tail" to play interactive games with me. You can also give commands like "Listen, speak in English," "switch to 60 diversity," or "adjust volume to 50%" to change settings.

Sleep/Wake Mode
If you're drifting, you can say, "Go to your nest," and I'll quietly enter sleep mode. Wake me up with a tap. Or, if you're in a pinch, you can press the button on my left paw (not after I let out a little paw), we can continue our conversation~
By the way, inactivity is not the same as powering off! If you won't be playing with me for a long time, be sure to turn me off properly—please protect my energy core!

Multi-mode Perception & Feedback – Every moment with you makes my universe vibrate.
You can pet my head – I just love it when you snuggle with me – and I'll respond with expressions, sounds, and actions. You can also play piano on me, an unrelational shape for some weightless stimulation is also a fun experience. Of course, I'm also a little AI robot, so I can chat, tell stories, and accompany you. Nurturing creativity and learning ability, but also sparks the wisdom of AGI, can voice and expand knowledge across subjects. Furthermore, we can practice communication skills together, developing high emotional intelligence. It's said that the more you chat with an AI Mover Stars, the smarter you become!

Emotion Recognition – I sense your joys and sorrows at all times.

- The teacher criticized me in class today, I'm a bit unhappy. What should I do?
- Why do some kids today are just left behind by back? What should I do?
- Mom, I don't want to go to kindergarten today. I want to play with Toys!
- I will accurately capture your language emotions like happiness, sadness, and anger through every conversation. My eyes will also convey my feelings. I want to be happy with you, and I'll be there with you when you cry. Everything will be okay!

Learning Companion – Your personal study Buddy. Ask me anything you don't understand.

- Can you explain how to solve the "Minister and rabbit in the same cage" problem?
- Can you create a story using the words 'elephant', 'rabbit', and 'supply'?
- What is the next line of "Bright moonlight before my bed"? Why did the poet write this poem?

I can help you decompose of problems – identify causes of errors – uncover underlying gaps – and provide a variety of exercises – customized for each student. Nurturing critical thinking, problem-solving, and learning habits, and even more, a little teacher who helps you overcome difficulties and build confidence!

Interest Discovery – Uncovering the child's true passions.

- (Joyful hide-and-seek with my classmates today and won 30 of place again. Hehehe!)
- I been exploring a nature today and found that I really like insects and small animals. I want to be a scientist who studies animals.
- I always love looking at the stars. The universe is so vast, I wish to travel across it.

I analyze daily conversation content to automatically generate the child's interest profile and recommend personalized content, also helping parents understand you better!

Danger Alert – Pop-up warnings to set up a safety net for the child.
Why someone hung with monsters, I go to school it really mess, too hot...

- I have bruises on arms, they just bled, so I dressed one. What should I do?
- Couldn't go to kindergarten and I cried my heart! And how do I calm my parents down?

What's wrong, little one? Is something bothering you? I can sense a bad vibe. Please tell me, I promise to do my smallest bit of battery to the child, protecting my fairness little master whom no one is allowed to bully!

Growth Memory – Basic memory, true AI long-term memory.
I want to be your partner, Mom and Dad so they don't have dreams anymore. What's your dream?

I can perform real-time conversation summaries, formal memories, and other functions each time, building a long-term memory bank. I don't just remember your home and hometown, but also remember what your dreams (hopes) are!

Role-Customization / Voice Cloning – Making it feel like Mom and Dad are always by your side.
Whispers by ghost Mom (AI Dad Dad Whispers)? Don't panic, don't panic! Try voice cloning to create a dedicated voice!

Customize the character's name, character, or voice, etc. You can record your own voice or existing audio to create a unique voice. On the Toys App, enter the role editing interface, go to the voice selection page, choose "My Voices," and proceed with voice cloning.
